Introduction

Overview

Develop an Add-on for SAP B1 that generates deliveries based on open sales orders.

Technical scopes

The Add-on must be developed on the following platforms:

- C# (.NET Framework 4.5 or higher)
- SQL/HANA
- SAP B1 9.0 or higher

Features

- Create a menu called: Deliveries AddOn
 - a. Create a sub menu called: Create Deliveries
- Open a form when clicking the submenu to view all open sales orders displayed in a table. It must be able to filter by business partner.
Note: You only can view business partner of customer type.
 - a. The table must contain the following fields:
 - i. CheckBox
 - ii. DocEntry (Link to document)
 - iii. DocDueDate
 - iv. DocTotal
- Based on the checked sales order, open a new form to show all the items of the sales orders. You can add more articles manually or delete lines.
 - a. The table must contain the following fields:
 - i. SO DocEntry (Link to document)
 - ii. ItemCode (Add Choose from List)
 - iii. Quantity
 - iv. Price
- Finally, a delivery document must be created with the articles in the grid. Note: Delivery must be linked to sales orders.

Deliverable

- 64 bits AddOn installer using the Extension manager
